saturation
recency
effective shading α
wins before the auction n
time since the last win τ
DP optimum, α* = b* / r
MPC(H=25, M=60), mean α chosen
MPC(H=25, M=60), 25–75% of the α chosen
MPC(H=25, M=1000), mean α chosen
MPC(H=25, M=1000), 25–75% of the α chosen
Shading, best constant α (0.5 / 0.6)
