saturation
effective shading α
wins before the auction n
DP optimum, α* = b* / r
MPC(H=25, M=60), mean α chosen
MPC, 25–75% of the α chosen
Shading, best constant α = 0.5
recency
time since the last win τ
DP optimum, α* = b* / r
MPC(H=25, M=60), mean α chosen
MPC, 25–75% of the α chosen
Shading, best constant α = 0.6
